VoiceCare Scheduler

- Speak to book your clinic visit (AssemblyAI)
- Voice-first booking for elderly patients who don't use apps
- Aiming Accessibility track — AssemblyAI Voice Agent Hackathon

1. Problem

- Elderly patients depend on family to book via tiny-text apps
- One confusing screen -> give up, or travel just to ask
- Missed calls 20-30% (team estimate, labeled) — clinics lose slots

2. Solution

- Ba speaks -> Con listens, asks back, books only after DUNG
- (Ba = Grandma, Con = care agent, DUNG = yes/correct)
- 3-turn golden path: 9h -> correct 10h (barge-in) -> confirm -> .ics
- Live demo: Streamlit URL, stranger opens, no setup

3. Live demo (judge clicks here)

- URL + type: dat lich kham sang mai 9 gio
- Correct: Khong, 10 gio nhe -> agent uses newer utterance
- Confirm DUNG (yes) -> booking + .ics | unclear -> human hotline

4. How it works (load-bearing)

- Voice Agent API: token 1-use + WS live, vi keyterms, barge-in, TTS
- 2 tools: check_availability (7-17h, anti-double) + book (gated)
- Fallback: batch/WS STT Universal-3-5-pro + diarization + entities + PII
- Remove AssemblyAI -> deaf demo. Repro: agent_api.py --print-session

5. Market

- Users: private clinics + over-60 non-app users
- VN: ~12M over-60 (UNFPA 2023), ~5,000 private clinics (MOH est.)
- SAM start: 500 clinics x $39/mo = $19.5k MRR = $234k ARR Y1

6. Revenue

- SaaS per clinic: $39 Solo / $99 Plus (rooms + SMS reminders)
- Cheaper than $250/mo phone receptionist
- Expansion: reminders, recall, multi-branch

7. Why AI now

- Vietnamese streaming STT + day/hour entities + barge-in/escalation
- Impossible-at-scale before streaming STT + agent tools
- Measured: PARTIAL ~1.1-1.3s, FINAL ~2.8-4.1s, local <5ms

8-9. Team + Roadmap

- Solo: engineer + domain + pitch (Vietnamese elderly care)
- M1: Agent API live on URL | M2: phone (Twilio) pilot 3 clinics
- M3: recall/SMS + audit dashboard for families

10. Ask

- Aiming Accessibility prize track — thank you
- Want: 3 pilot clinics + Accessibility feedback
- Repo + demo + video links on submission page
